Under the IQAC Cell of Shri Prince Shivaji Maratha Boarding House's, New College of Pharmacy Uchagaon, Kolhapur organized **“Guest Lecture on Medical Coding”** on **Wednesday 29th January 2025**”

The Main Chief Guest for this Event was Mrs. Tejaswi Shrikant Ulhalkar Madam, who completed her MSc in Microbiology and having 3 years of Medical coding experience and also Founder of Medwise Healthcare Solutions, gave valuable guidance in Medical Coding. Medical Coding is main era of now a days as it on Medical coders are in relatively high demand. She explained it in simple way. She explained What is medical coding? And how it is valuable now a days. Medical coding is the process of taking a patient's health care information like medical procedures, diagnosis, necessary medical equipment, and medical services information from the physician's notes. A medical coder transforms this information into universal medical alphanumeric codes. There are three types of universally known medical alphanumeric codes: International Classification of Diseases (ICD): The World Health Organization (WHO) created this internationally used code. The classification system is largely used for the purpose of health recording and data collection, among other uses. These codes can classify symptoms, diseases, illnesses, and causes of death. Current Procedural Terminology (CPT): CPT codes identify medical, surgical, and diagnostic procedures and services within the US. The American Medical Association (AMA) developed this system, which includes three categories: procedures and contemporary medical practices, clinical labs, and emerging technologies. Healthcare Common Procedure Coding (HCPCS): The Centers for Medicare and Medicaid Services (CMS) developed this coding system to help with processing insurance claims for Medicare or other providers. Coders use them to note medical procedures, products, supplies, and services.

Medical coding's primary use is to ensure medical billing and insurance carriers pay and process claims correctly, but the system is also valuable for research purposes and basic medical record-keeping for patients. Each code tells insurance companies, researchers, and health care providers the exact diagnosis, procedure, and/or medical service provided. In short, these codes act as a universal way to quantify health care visits and make physician's notes less abstract for insurance carriers and future health providers.

Finally vote of thanks was given by Mr.R.V Mane Sir .This Guest lecture on Medical Coding was very enthusiastic and fully of various data gaining opportunity as many students got their doubts cleared.
